

Dear Patient,

Enclosed are several forms to help prepare you for your initial consultation at Synergy Natural Medicine Clinic. Please complete them to the best of your ability and contact us if you need assistance or have any questions or concerns prior to your appointment.

- **1. Adjunctive Medical Care for Cancer Patients –** This briefly describes the kind of care we provide to cancer patients at Synergy Natural Medicine Clinic.
- 2. Medical Records Checklist Please complete and bring with you.

We need relevant information regarding your cancer diagnosis, including the pathology report, bloodwork, relevant diagnostic tests, the course of radiotherapy or chemotherapy prescribed by your oncologist (if applicable). We also need to know about any prescription drugs or food supplements you may be taking.

You may already have some/all of this information. For medical records that you are missing, either ask your oncologist for them or request them using our Cancer Records Release Form.

Please try to bring as much of this information as possible with you on your scheduled appointment date.

- **3. Cancer Records Release Form** Use this form to request medical records you do not have from your oncologist or facility providing your medical care.
- **4. 5-Day Diet Diary -** *Please complete and bring with you.* This helps us to better understand your current eating habits and is very important to complete for at least 3 days (5 days preferred).
- 5. Nutritional Assessment Questionnaire <u>Please complete and bring with you.</u>

We look forward to working with you.

Sincerely,

Synergy Natural Medicine Clinic

Adjunctive Medical Care for Cancer Patients

Thank you for the opportunity to provide you with medical care in connection with your diagnosis of cancer. Prior to consultation and treatment, we want to inform you about the kind of care we provide to cancer patients at our Clinic.

Cancer is a serious disease in modern society. An estimated 40% of the US population will develop cancer at some point in their life. The standard methods for treating patients with cancer are surgery, radiotherapy and chemotherapy drugs. In combination with earlier detection, these methods have increased survival rates and length of survival from diagnosis. Despite these advances, about half of patients diagnosed with cancer will eventually die from cancer. In addition, most patients will suffer many significant side effects from the progression of the disease or from standard treatment methods (surgery/radiotherapy, chemotherapy). These side effects can inhibit the body's natural ability to fight cancer, cause serious pain and disability, and reduce a cancer patient's quality of life.

We provide adjunctive treatment plans for patients diagnosed with cancer. This means several important things that we want to clarify and make sure you understand before we provide care.

First, our care is adjunctive and should be used along with standard cancer treatment methods, not in place of them. We recommend that you strongly consider the advice of your Oncologist when making decisions about standard medical treatments for cancer. Please make sure you are well informed about the benefits, risks and side effects of treatment. Your course of standard therapy should be agreed upon by you and your Oncologist.

Second, the adjunctive treatment of cancer is an evolving field of medicine and is not standardized. The methods we use to treat patients with cancer are based on clinical evidence and research compiled through a variety of means including, but not limited to, research published in medical journals, research and advice from experts in both standard and adjunctive cancer treatment methods, and research provided by private companies. The standard of care we use when treating patients with cancer is in compliance with the requirements of a licensed Naturopathic Doctor in the state of California, but have not been evaluated or approved by the FDA for the treatment of cancer.

Third, we want to clarify that we are not directly treating cancer. Instead, we are treating patients who have cancer. The primary goals of our adjunctive cancer treatment plans include but are not limited to:

- (1) Improving survival rates and length of survival by strengthening the immune system and other bodily organ systems, improving the efficacy of standard cancer therapy, and addressing risk factors associated with poorer outcomes.
- (2) Improving quality of life measures by decreasing side effects associated with cancer progression and standard cancer therapy.

The Naturopathic Doctor will discuss the nature, purpose, benefits, major risks and likelihood of success of the proposed treatment plan, as well as the risks if you decide against treatment.

Fourth, in discussing your treatment plan, we may use the term "cytotoxic". We use this term to generally describe the body's ability to fight cancer by creating a more cytotoxic environment and less hospitable environment for cancer. We do not prescribe substances that are cytotoxic to cancer cells. For example, mistletoe injections have been shown to active NK cells and T-cells, which are part of the immune system that is fighting against cancer. We do not support or make claims that substances we provide are cytotoxic to cancer.

Medical Records Checklist

Pathology Report
Diagnostic Imaging Report (DIR) - Most recent report
Bloodwork - Most recent CMP (Comprehensive Metabolic Panel) and CBC (Complete Blood Count)
Radiotherapy/Chemotherapy Treatment Plan -
Prescription drugs prescribed by your Oncologist
Other prescription drugs you may be taking
Vitamins and nutritional supplements you current consume
